INSIGHTS REPORT MODULE

QUANTUM Insights Report Module leverages the extensive data collected by the QUANTUM System to bring unprecedented visibility to patterns and trends in your facility, with a snapshot of daily, weekly, and monthly operations. Identify opportunities for increased efficiency, peak demand times, and response time trends. Included with every QUANTUM System.

| 1 Year Historical Data | Schedule Custom Email Reports | Integration Compatible | Turn Data into Actionable Intelligence | Filters for Precise Reporting |

DATA TO ACTION

From an overall view of your entire facility to the details of a specific resident, Insights make it simple to turn data into actionable intelligence. Utilizing the precise filters in QUANTUM reports, Insights can be used to identify which areas of your facility are busiest, which residents in those areas require the most care, and which types of calls are most frequent.

ENHANCED CARE

Use historical data on a per-resident basis to assist with building a care plan and determining strategies for providing preemptive care. Up to one year of data can be analyzed per report, allowing you to identify trends and assist in making data-driven business and staff decisions.
