QUANTUM™
MOBILE ALERTING AND MONITORING

Quantum Mobile, a comprehensive mobile alerting and monitoring solution, was designed as a modern, full-featured alternative to pagers.

By allowing staff to claim alarms, Quantum Mobile helps reduce response times and improve efficiency. Should a claimed alarm go unanswered for a specified time, Quantum can automatically remove the claim on the alarm and notify all other staff that further attention is needed.

Quantum mobile was built for redundancy from the ground up. In the unlikely event of a network or phone failure, the system will quickly detect the failure and automatically reroute alarms to alternative devices, such as pagers or text messages.

The Quantum server documents all activity with the mobile application, including detailed records on which phones and staff received the alarm, who claimed the alarm, and the alarm response time.
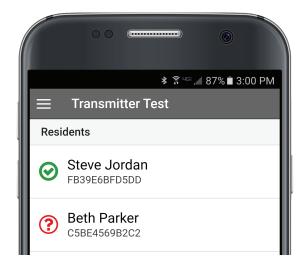

SPECIFICATIONS

Available Functionality	Active Alarm Notification
	Claimed Alarm Status
	Resident Check In Report
	Wanderer Transmitter Test
Supported Platform	Android OS
	5.0.1 Lollipop or Later
	Transmitter Test Requires Bluetooth LE
Alert Options	Audible and Vibrate Options
	Fail-Over to Alternative Device
Requirements	Facility-Wide WiFi Coverage
	Access to Quantum Server from WiFi

SIMPLIFY CARE

In addition to alarm functionality, Quantum Mobile can be used to monitor the status and battery of Quantum wanderer transmitters, without disturbing the resident.

Additionally, resident wellness check-in reports can be accessed from Quantum Mobile, allowing staff to quickly verify the welfare of your residents.
